## United States Patent and Trademark Office

COMMISSIONER FOR PATENTS
UNITED STATES PATENT AND TRADEMARK OFFICE
WASHINGTON, D.C. 2023I
www.uspto.gov

## **Detailed Office Action**

- 1. This action is in response to the application 09/490,630 filed. January 24, 2000
- 2. Claims 1-22 rejected have been examined

# Claim Rejections - 35 USC §

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

- 4. Claims 1-22 rejected under 35 U.S.C. 102(e) as being clearly anticipated by Muller et al (USPN 6,453,360 B1 Date of Patent: September 17, 2002, herein referred to as "Muller").
- 5. As to claim 1, Muller teaches the invention as claimed, including a method for processing

storage data that is to be communicated over a network, comprising:

providing storage data to be transmitted over a network (col.1, line 64 to col.2, line 5, col.2 lines 19-33, and col.2, line 59 to col.3, line 15);

serializing the storage data using storage encapsulation protocol headers to generated serialized storage data (col.23, line 57 to col.24, line 11, col.23, lines 18-34, and col.2, lines 6-33);

encapsulating the serialized storage data using a simple transport protocol to generate simple transport protocol data segments of the storage data (col.13, lines1-14, col.2, lines 6-33, and col.22, lines 21-35); and

encapsulating each of the simple transport protocol data segments into Ethernet frames (col.21, lines 12-44).

6. As to claim 2, Muller teaches the invention as claimed, wherein the serializing of the storage data using storage encapsulation protocol headers to generate serialized storage data includes:

receiving the storage data, the storage data including one or both of commands and data, the commands including write commands, read commands, control commands ,and status commands (col.2, line 59 to col.3, line 15);

selecting portions of the received storage data to be serialized, the selected portions including commands and data (col.5, lines 40-53); and

appending storage encapsulation protocol headers to each of the selected portions (col. 14, lines 22-47).

7. As to claim 3, Muller teaches the invention as claimed, wherein the encapsulating of the serialized storage data using a simple transport protocol to generate simple transport protocol data segments of the storage data includes:

selecting portions of the serialized storage data (col.2, lines 19-33); and appending simple transport protocol headers to the selected portions to generate the simple transport protocol data segments of the storage data (col.14, lines22-47).

8. As to claim 4, Muller teaches the invention as claimed, wherein the encapsulating of each of the simple transport protocol data segments into Ethernet packets includes:

generating media access controller (MAC) header (col.12, lines 63-67, and col.20, lines 36-44);

appending the simple transport protocol segments to the MAC header (col.48, lines 49-67, and col.20, lines 36-44); and

appending a cyclic redundancy check (CRC) to the simple transport protocol segments (col.51, lines 1-11, and col.66, lines 33-39).

- 9. As to claim 5, Muller teaches the invention as claimed, wherein the simple transport protocol headers each include at least a handle field, a type field, a length field, a sequence number field, and an acknowledgment field (col.8, lines 55-67, and col.14, lines 34-47).
- 10. As to claim 6, Muller teaches the invention as claimed, wherein the handle field is used to exchange a handle during the commencement of a session, the handle being exchanged between a initiator and a target of the network (col.16, lines 46-61).
- 11. As to claim 7, Muller teaches the invention as claimed, wherein the sequence number field is configured to count Ethernet frames (col.20, lines 36-44, and col.6, lines 1-45).

- 12. As to claim 8, Muller teaches the invention as claimed, wherein the acknowledgment field is used to exchange positive and negative acknowledgments of transactions (col.34, lines 42-56, and col.33, lines 1-14).
- 13. As to claim 9, Muller teaches the invention as claimed, wherein the storage encapsulation protocol contains a tag so that data segments and data segments of the storage data can be matched to a correct command (col.47, line 30 to col.48, line 40).
- 14. As to claim 10, Muller teaches the invention as claimed, wherein the STP transport protocol is configured to provide a stream of bytes arriving in the same order as they were sent (col.111, lines 22-40).
- 15. As to claim 11, Muller teaches the invention as claimed further comprising: appending an IP header to each of the simple transport protocol data segments (col.3, lines 16-42).
- 16. As to claim 12, Muller teaches the invention as claimed, wherein the storage data is selected from one of SCSI data, ATAPI data, and UDMA data (col.8, lines 50-65).
- 17. As to claim 13, Muller teaches the invention as claimed, including a method for communicating storage data over an Ethernet network using a non-TCP lightweight transport protocol, comprising:

providing data having a peripheral device protocol format, the data to be communicated over the Ethernet network (col.3, lines 42-64, and col.8, lines 3-9);

selecting portions of the data (col.2, lines 19-33);

attaching storage encapsulation (SEP) headers (col.14, lines 22-47) to the selected portions of the data (col.29, line 65 to col.20, line 9, and col.43, lines 5-15);

attaching simple transport protocol (STP) headers to one or more of the selected portions (col. 14, lines 22-47)having the SEP headers to produce STP packets (col.21, lines 19-35); and encapsulating the STP packets into Ethernet frames for communication over the Ethernet network (col.2, lines 19-58, and col.58, lines 42-63).

- 18. As to claim 14, Muller teaches the invention as claimed, wherein wherein the peripheral device protocol format is one of a SCSI format, an ATAPI format, and a UDMA format (col.8, lines 50-65).
- 19. As to claim 15, Muller teaches the invention as claimed, wherein the STP headers include at least a handle field, a type field, a length field, a sequence number field, and an acknowledgment field (col.8, lines 55-67, and col.14, lines 34-47).
- 20. As to claim 16, Muller teaches the invention as claimed, wherein the handle field is used to exchange a handle during the commencement of a session, the handle being exchanged between a initiator and a target of the network (col.16, lines 46-61).
- As to claim 17, Muller teaches the invention as claimed, wherein the sequence number field is configured to count Ethernet frames (col.20, lines 36-44).
- As to claim 18, Muller h teaches the invention as claimed, wherein the acknowledgment field is used to exchange positive and negative acknowledgments of transactions (col.34, lines 42-56, and col.33, lines 1-14).
- 23. As to claim 19, Muller teaches the invention as claimed, including a method for communicating data over an Ethernet network using a non- a TCP lightweight transport protocol, comprising:

providing data having a virtual interface format, the data to be communicated over the

Ethernet network (col.18, lines 42-58, and col.16, lines 10-24);

selecting portions of the data (col.2, lines 19-33); attaching simple transport protocol (STP) headers to the selected portions of the data to produce STP packets (col.14, lines 22-47, and col.21, lines 19-35); and

encapsulating the STP packets into Ethernet frames for communication over the Ethernet network (col.2, lines 19-58, and col.58, lines 42-63).

24. As to claim 20, Muller teaches the invention as claimed, including a method for communicating data over a network using a non-TCP lightweight transport protocol, comprising: providing data, the data to be communicated over the network (col.1, line 64 to col.2, line

5, col.2 lines 19-33, and col.2, line 59 to col.3, line 15);

selecting portions of the data (col.2, lines 19-33);

attaching simple transport protocol (STP) headers to the selected portions of the data to produce STP packets (col.14, lines 22-47, and col.21, lines 19-35); and

encapsulating the STP packets into frames for communication over the network (col.2, lines 19-58, and col.58, lines 42-63).

- 25. As to claim 21, Muller teaches the invention as claimed, wherein the data is one of storage data, network data, file data, and virtual interface data (col.15, lines 12-26, and col.8, lines3-9).
- As to claim 22, Muller teaches the invention as claimed, wherein the network is configured to communicate storage data (col.4, lines 47-60, and col.8, lines 22-29)

#### Conclusion

- 27. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 28. Any inquiries concerning this communication or earlier communications from the examiner should be directed to **Tammy T. Nguyen** who may be reached via telephone at (703) 305-7982. The examiner can normally be reached Monday through Friday between 8:00 a.m. and 4:30 p.m. eastern standard time. If you need to send the Examiner, a facsimile transmission regarding After Final issues, please send it to (703) 746-7238. If you need to send an Official facsimile transmission, please send it to (703) 746-7239. If you would like to send a Non-Official (draft) facsimile transmission the fax is (703) 746-7240. If attempts to reach the examiner by telephone are unsuccessful, the Examiner's Supervisor, **David Wiley**, may be reached at (703) 308-5221.
- 29. Any response to this office action should be mailed to: Director of Patents and Trademarks Washington, D.C. 20231. Moreover, hand-delivered responses should be delivered to the Receptionist, located on the fourth floor of Crystal Park 11, 2121 Crystal Drive Arlington, Virginia.
